- Abstract
- In September 2021, a significant jump in seismic activity on the island of La Palma
- (Canary Islands, Spain) signaled the start of a volcanic crisis that still continues at
- the time of writing. Earthquake data is continually collected and published by the
- Instituto Geográphico Nacional (IGN). ...

1 Introduction

Figure 1: Map of La Palma

La Palma is one of the west most islands in the Volcanic Archipelago of the Canary 10 Islands Figure 1.

Table 1: Recent historic eruptions on La Palma

Name	Year
Current	2021
Teneguía	1971
Nambroque	1949
El Charco	1712
Volcán San Antonio	1677
Volcán San Martin	1646
Tajuya near El Paso	1585
Montaña Quemada	1492

- Table 1 summarises the eruptions recorded since the colonization of the islands by 12
- Europeans in the late 1400s. 13
- The probability of a future eruption can be modeled by a Poisson distribution Equa-14
- tion 1. 15

11

$$p(x) = \frac{e^{-\lambda}\lambda^x}{x!} \tag{1}$$

Where λ is the number of eruptions per year.

- Studies of the magma systems feeding the volcano, such as Marrero et al. (2019) has proposed that there are two main magma reservoirs feeding the Cumbre Vieja volcano; one in the mantle (30-40km depth) which charges and in turn feeds a shallower crustal reservoir (10-20km depth).
